

SETUP

1 Pull the legs out diagonally until they are half a meter apart.

2 Stand mid way between the legs and proceed to lift the frame from the bottom of the cross braces. The process is made easier by having 2 people on opposite sides of the frame. Keep lifting until the legs have moved the full distance (ie. 3m apart). Shaking the Ex-Dome whilst lifting will help move the legs apart.

3 With one foot standing on the base plate, press the red button on the top of the leg and raise the gazebo to mid height. A firm click will be heard. Repeat at each corner, alternating sides.

4 Now step inside the gazebo and approach any corner. With one foot on the base plate, place your hand on the pole coming out of the bottom slider of the leg. The higher you place your hand, the easier it will push up. Push upwards until the top slider reaches the stop.

5 Now lower the red lever to lock the slider in place.

Troubleshooting: Ensure when raising the slider that the flexible shafts do not twist. If this happens then simply wiggle the aluminium section in your hand to fix this. (see picture)

Repeat this at each corner. Once complete, the fabric will be tight on the frame.

6 Step outside the Ex-Dome and raise each leg to the desired height. In windy conditions, fasten down the Ex-Dome using the ropes in each corner of the fabric or by weighing down the legs.

TAKE DOWN

1 Standing inside the Ex-Dome, and with one foot on the leg's base plate, place your hand on the pole connected to the bottom slider with the red handle. Push the section up and with your other hand raise the red lever. Now pull down the aluminium section just enough to cause the fibre rods above to both point down. This should not require much effort.

Troubleshooting:

Ensure the flexible shafts on the inside of the roof do not catch the fabric. If this does occur, push the aluminium section up and down to release the fabric. Repeat this step at each corner.

If you find the lever too high to release, lower the Ex-Dome to the desired height using the leg buttons on the outside.

2 Now move outside the Ex-Dome and begin to push the legs in towards the centre. Alternate between the legs until they all meet in the centre. (see picture)

3 Finally lower the legs for an easy fit into the bag.
